Notable Java collections libraries

Fastutil

<http://fastutil.di.unimi.it/>

Fast & compact type-specific collections for Java
Great default choice for collections of primitive types, like int or long. Also handles big collections with more than 2^{31} elements well.

Guava

<https://github.com/google/guava>

Google Core Libraries for Java 6+

Perhaps the default collection library for Java projects. Contains a magnitude of convenient methods for creating collection, like fluent builders, as well as advanced collection types.

Eclipse Collections

Features you want with the collections you need

Previously known as gs-collections, this library includes almost any collection you might need: primitive type collections, multimaps, bidirectional maps and so on.

JCTools

<https://github.com/JCTools/JCTools>

Java Concurrency Tools for the JVM.

If you work on high throughput concurrent applications and need a way to increase your performance, check out JCTools.

What can your collection do for you?

| Collection class |  Thread-safe alternative | Your data | | | | Operations on your collections | | | | | | |
|---------------------------|---|---------------------|-----------------|---------------------------|-------------------|--------------------------------|--------|------|-----------------------------|---------------|----------|----------|
| | | Individual elements | Key-value pairs | Duplicate element support | Primitive support | Order of iteration | | | Performant 'contains' check | Random access | | |

| HashMap | ConcurrentHashMap | ✗ | ✓ | ✗ | ✗ | ✗ | ✗ | ✗ | ✓ | ✓ | ✗ | ✗ |
| HashBiMap (Guava) | Maps.synchronizedBiMap (new HashBiMap()) | ✗ | ✓ | ✗ | ✗ | ✗ | ✗ | ✗ | ✓ | ✓ | ✓ | ✗ |

* $O(\log(n))$ complexity, while all others are $O(1)$ - constant time

** when using Queue interface methods: offer() / poll()

How fast are your collections?

| Collection class | Random access by index / key | Search / Contains | Insert |
|------------------|------------------------------|-------------------|--------------|
| ArrayList | $O(1)$ | $O(n)$ | $O(n)$ |
| HashSet | $O(1)$ | $O(1)$ | $O(1)$ |
| HashMap | $O(1)$ | $O(1)$ | $O(1)$ |
| TreeMap | $O(\log(n))$ | $O(\log(n))$ | $O(\log(n))$ |

Remember, not all operations are equally fast. Here's a reminder of how to treat the Big-O complexity notation:

$O(1)$ - constant time, really fast, doesn't depend on the size of your collection

$O(\log(n))$ - pretty fast, your collection size has to be extreme to notice a performance impact

$O(n)$ - linear to your collection size: the larger your collection is, the slower your operations will be
